

Amendments to the Abstract:

In the English translation document, please add the abstract at page 12 line 1, as follows:

--ABSTRACT

The mixed operation of TDM/SIP CENTREX communication architectures does not support the Name Delivery feature. In one aspect, a method for supporting a Name Delivery feature between a TDM network connected to SIP CENTREX configurations is provided. The Name Delivery feature including name information includes mapping between the name information located in a plurality of information elements of a transmission protocol and a SIP protocol. Based on subscriber related information a determination is made whether to suppress or approve the name information in the SIP protocol.--
